This hardcopy data package contains sample and QC results for five soil samples and two water samples, requested for the above referenced project on 11/01/07 and 11/06/07. The samples were received on ice and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:
5035 samples not analyzed within 48 hours were frozen. High surrogate recoveries were observed for trifluorotoluene (FID) in the MS/MSD for batch 131434; the corresponding bromofluorobenzene (FID) surrogate recoveries were within limits, and the parent sample was not a project sample. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 131365; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:
Matrix spikes were not performed for this analysis due to insufficient sample volume. No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:
Low recovery was observed for diesel C12-C24 in the MSD of 1065EX359[4.0] (lab # 198903-001); the LCS was within limits, and the associated RPD was within limits. Low recoveries were observed for diesel C12-C24 in the MS/MSD for batch 131296; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. Diesel C12-C24 was detected between the MDL and the RL in the method blank for batch 131296. DUP110107 (lab # 198903-003) was diluted due to the dark, viscous nature of the sample extract. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:
Matrix spikes were not performed for this analysis due to insufficient sample volume. Acetone, benzene, and methylene chloride were detected between the MDL and the RL in the method blank for batch 131356; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in 1065EX360RB361 (lab # 198903-004); this analyte is a common laboratory contaminant. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:

Samples Received:	**11/01/07**

Volatile Organics by GC/MS (EPA 8260B) Soil:
observed for 1,2-dibromo-3-chloropropane and naphthalene in the CCV analyzed 11/02/07 09:15 and the CCV analyzed 11/07/07 08:36; these analytes met minimum response criteria. Acetone and methylene chloride were detected between the MDL and the RL in the method blank for batch 131244 and the method blank for batch 131403; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in 1065EX362[5.5] (lab # 198903-007); this analyte is a common laboratory contaminant. 1065EX362[5.5] (lab # 198903-007) was not diluted; the low sample weight is due to 5035 packaging. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:
Matrix spikes were not performed for this analysis due to insufficient sample volume. No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:
High responses were observed for benzo(k)fluoranthene and dibenz(a,h)anthracene in the CCV analyzed 11/08/07 18:55. These analytes were not detected at or above the RL in the associated method blank. 1065EX360[4.0] (lab # 198903-002) and DUP110107 (lab # 198903-003) were diluted due to the amber color of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
No analytical problems were encountered.

Metals (EPA 6010B, EPA 6020, and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD of 1065EX359[4.0] (lab # 198903-001); the BS/BSD were within limits, the associated RPD was within limits, and the post digest spike was within limits. High recoveries were observed for copper, lead, and zinc; the BS/BSD were within limits, the associated RPDs were within limits, and the post digest spike was within limits. High recoveries were observed for mercury in the MS/MSD for batch 131359; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPD was within limits. Low recoveries were observed for mercury in the MS/MSD of 1065EX359[4.0] (lab # 198903-001); the BS/BSD were within limits, and the associated RPD was within limits. Low recoveries were observed for many analytes in the MS/MSD for batch 131447; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits. High recoveries were observed for

This hardcopy data package contains sample and QC results for three soil samples, requested for the above referenced project on 11/07/07. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
5035 samples not analyzed within 48 hours were frozen. High surrogate recovery was observed for trifluorotoluene (FID) in the MSD of 1065EX363[8.0] (lab # 199042-003). High surrogate recoveries were observed for bromofluorobenzene (FID) in 1065EX365[6.5] (lab # 199042-005) and the MSD of 1065EX363[8.0] (lab # 199042-003). Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 131494; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
Diesel C12-C24 was detected between the MDL and the RL in the method blank for batch 131458; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
5035 samples not analyzed within 48 hours were frozen. Low responses were observed for many analytes in the CCV analyzed 11/08/07 10:12; these analytes met minimum response criteria. Acetone and methylene chloride were detected between the MDL and the RL in the method blank for batch 131459; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in 1065EX363[8.0] (lab # 199042-003), 1065EX364[6.0] (lab # 199042-004), and 1065EX365[6.5] (lab # 199042-005); this analyte is a common laboratory contaminant. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for benzo(k)fluoranthene and dibenz(a,h)anthracene in the CCV analyzed 11/08/07 18:55. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony in the MS/MSD of 1065EX363[8.0] (lab # 199042-003); the BS/BSD were within limits, and the associated RPD was within limits. High recovery was observed for copper in the MS of 1065EX363[8.0] (lab # 199042-003); the BS/BSD were within limits, and the

associated RPD was within limits. High recovery was observed for mercury in the MS of 1065EX363[8.0] (lab # 199042-003); the BS/BSD were within limits, and the associated RPD was within limits. High % difference was observed for antimony in the serial dilution of 1065EX363[8.0] (lab # 199042-003). CASE NARRATIVE

Laboratory number:	**199163**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 EX 2 Presidio**
Request Date:	**11/12/07**
Samples Received:	**11/12/07**

This hardcopy data package contains sample and QC results for six soil samples, requested for the above referenced project on 11/12/07. The samples were received on ice and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
5035 samples not analyzed within 48 hours were frozen. Low recoveries were observed for gasoline C7-C12 in the MS/MSD of 1065EX343[5.0] (lab # 199163-004); these low recoveries were confirmed by re-analysis, the LCS was within limits, and the associated RPD was within limits. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 131668; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
5035 samples not analyzed within 48 hours were frozen. Matrix spikes were not reported for batch 131629 because the parent sample required reanalysis in another batch. Low response was observed for Freon 113 in the CCV analyzed 11/12/07 16:39; this analyte met minimum response criteria. High responses were observed for acetone and Freon 12 in the CCV analyzed 11/13/07 11:38; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". Acetone and methylene chloride were detected between the MDL and the RL in the method blank for batch 131629 and the method blank for batch 131648; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in many samples; this analyte is a common laboratory contaminant. 1065EX343[5.0] (lab # 199163-004) was not diluted; the low sample weight is due to 5035 packaging. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for dibenz(a,h)anthracene and indeno(1,2,3-cd)pyrene in the CCV analyzed 11/13/07 19:26; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". 1065EX342[5.0] (lab # 199163-003) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for antimony in the MS/MSD of 1065EX343[5.0] (lab # 199163-004); the BS/BSD were within limits, and the associated RPD was within limits. High recoveries were observed for a number of analytes; the BS/BSD were within limits. High RPD was observed for copper, lead, and zinc; the RPD was acceptable in the BS/BSD. Low recoveries were observed for many analytes in the MS/MSD for batch 131692; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits. High % difference was observed for antimony in the serial dilution of 1065EX343[5.0] (lab # 199163-004). Many analytes were detected between the MDL and the RL in the method blank for batch 131692; these analytes were either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):

High RPD was observed for moisture, percent in the SDUP of 1065EX341[7.0] (lab # 199163-001). No other analytical problems were encountered.

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 11/14/07. The sample was received on ice and intact. Sample 1065EX367[4.0] (lab # 199248-002) was not used as the designated spike sample for PAHs and mercury; the samples were prepared prior to identification of this sample.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 131741; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
High responses were observed for 2,2-dichloropropane and tetrachloroethene in the CCV analyzed 11/14/07 08:39; these analytes were not detected at or above the RL in the associated samples. Methylene chloride was detected between the MDL and the RL in the method blank for batch 131706; this analyte was not detected in the sample at or above the RL. Methylene chloride was detected between the MDL and the RL in 1065EX367[4.0] (lab # 199248-002); this analyte is a common laboratory contaminant. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
Matrix spikes were not reported for batch 131815 because the parent sample required a dilution that would have diluted out the spikes. The sample spiked was not from this site. 2-methylnaphthalene and phenanthrene were detected between the MDL and the RL in the method blank for batch 131815; these analytes were not detected in the sample at or above the RL. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for many analytes in the MS/MSD of 1065EX367[4.0] (lab # 199248-002); the BS/BSD were within limits, and the associated RPDs were within limits. High % differences were observed for many analytes in the serial dilution of 1065EX367[4.0] (lab # 199248-002). Beryllium, nickel, and selenium were detected between the MDL and the RL in the method blank for batch 131816; these analytes were detected in the sample at a level at least 10 times that of the blank. No other analytical problems were encountered.

Subject: FW: Is the acetone really at that concentration?

Steve,

It looks like the acetone sample that I collected today (1065Ex366[4.0] at 940 am) will be put on hold and not analyzed. Just wanted to let you know before you started the analyses.

Thank you,

Scott

The acetone result for sample 106ex\\\5 was qualified as not detected. Because of the short turnaround, we did not have time to load any qualifiers. The table will be updated for the next meeting.

Hi Mary Jo

That acetone result was changed to ND due to blank contamination (as was the methylene chloride hit). The reporting limit for acetone for that sample was 6000 ug/kg. The sample required a dilution due to total petroleum hydrocarbons present in the sample.

Subject: Is the acetone really at that concentration?
Importance: High

I am checking on the analytical result for acetone in sample 1065EX357 which shows up as an exceedance on the attached table. I want to verify that that result was reviewed during the Level II and could not be qualified as non detect and that there were no calculation errors based on dilutions that would result in order of magnitude changes in concentrations. We have collected a sample adjacent to that sample and will be analyzing it for acetone, but before doing soil wanted to verify that the result was reviewed and will be reported at that concentration. Thanks for your help. Scott has already collected the sample and has put it on hold and is waiting on an answer from you.
